

Adobe Premiere Pro Plugin

User Guide

Overview

This plugin provides an interface to the GrayMeta platform within Adobe Premiere Pro. It enables users to search and find specific content within assets.

The plugin runs in Adobe Premiere Pro on both the Windows and Mac.

Configuration

Install

Install directly with Creative Cloud and Adobe Exchange: https://www.adobeexchange.com/creativecloud.details.100656.html

Alternative Installation

Install ZXP installer from **zxpinstaller.com**

- 1. Drag the GrayMeta ZXP file into the installer and it will perform the installation. It may prompt you for admin access during installation.
- 2. Alternatively, click within the ZXP installer window and browse for the ZXP file.

Uninstall

1. Delete the plugin folder from the install location.

2. Default locations:

- PC: C:\Program Files (x86)\Common Files\Adobe\CEP\extensions
- Mac: /Library/Application Support/Adobe/CEP/extensions

Using the plugin

This section describes how to start and stop the plugin as well as how to login to the associated GrayMeta platform.

Opening the GrayMeta Panel

- 1. Make sure an Adobe Premiere Pro project is open
- 2. Click on Window > Extensions > GrayMeta

Ś.	Premiere Pro C	C File	Edit Clip	Sequence	Markers	Graphics	Window Help		
000	9	_				_	Workspaces Find Extensions on Exchange	► e	
Source	r (no clips) Effe	ct Controls	Audio Clip	Mixor M	atadata	GravMeta =	Extensions	Þ	Assets

GII	Q Search for vide	o					Audio Clip Effect Editor Audio Track Effect Editor		

3. The plugin will open in a new panel

GrayMeta Login

When the plugin is first started, you will be greeted by the login page.

 Key in your GrayMeta instance URL (e.g. company_name.graymeta.com)

- 2. Key in the API key generated from the web platform.
 - a. Log in to the GrayMeta instance.
 - b. Click on your profile picture in the top right corner.
 - c. Click on "SETTINGS" from the dropdown menu.
 - d. Go to Developers > API Keys

Stop Plugin

Click on the menu and select "Close Panel".

Note: Alternatively, if the panel is undocked, it can also be closed with the X like any other window.

2. Invalid API Key. Please check the API key

is a valid and active key.

Plugin Functionality

This section describes the general plugin functionality and how to use it.

- > There are two primary steps, select video of interest and examine and make use of it through MediaDNA™.
- > You can collapse / expand search and MediaDNA™ to optimize use of panel real estate.
- > You can dock the panel or leave free floating to allow flexibility for the user.
- > You can resize the panel.

Search

- > The search bar returns keyword searches on video titles and MediaDNA™.
- > For example, searching "Brad Pitt" will return the videos containing "Brad Pitt" MediaDNA™ or within its title.
- > If no input text is given in the search bar, it will return all the videos in the result.

To perform a search

- 1. Type the keyword into the Search Bar.
- 2. Press "Enter" or click the Search Icon (Magnifying Glass) to start the search action.
- 3. The result will be displayed into the Result Box.
- 4. To change the result displayed in List View, click the List View Icon, vice-versa for the Grid View
- 5. Scrolling the result box to the bottom will perform a subsequent search to populate more data into the result box if there is more available result.

List View

The user can perform sorting by clicking the columns header of the List View. Only the name, date modified, size and length can be sortable.

The user can perform sorting by clicking the columns header of the List View. Only the name, date modified, size and length can be sortable.

Q brad pitt

Media DNA™

There are 5 categories of MediaDNA[™] currently supported by the plugin:

- > **People:** Known person(s) (e.g. Brad Pitt, Will Smith, Usain Bolt)
- > Logos: Logo(s) (e.g. Pepsi, Nike, Los Angeles Dodgers)
- > Adult Content: Adult content category(s) (e.g. nudity, gore, drugs)
- > Audio: Audio components (e.g. speech, music)
- > Black Frames: Black frame(s)

Timeline Segments

When a video is selected from the search results, the MediaDNA[™] section will be populated by a list of the MediaDNA[™] detected by the GrayMeta platform.

- > There will be a yellow bar up top representing the timeline in the video.
- > There will be blue segments on each row of MediaDNA[™] representing where in the timeline it has been detected.
- > If there are no MediaDNA[™] found in a category, a message is displayed in its place.
- > You can scrub left and right to examine the video in typical Adobe Premiere Pro fashion.
 - Drag the knob inwards to zoom in
 - Drag the knob outward to zoom out
 - Drag the middle portion of the bar to pan the timeline

Zoom in of category with no MediaDNA[™] detected

Zoom Control

Category Filters

- > At the top left of the MediaDNA[™] section, there are 5 buttons with the categories of MediaDNA[™]. These are category filters which you can toggle on/off to show/hide the category of MediaDNA[™]. These are all set to show/on by default.
 - To hide a category, just click on it to turn it from Blue to Grey.
 - To show a hidden category, just click on it to turn it from Grey to Blue.
- > At the top right of the MediaDNA[™] section, there is a button "Inverse Clip Selection". This inverts the MediaDNA[™] segments to show where the MediaDNA[™] is absent in the video instead.
 - To go into invert-mode, just click on the button to change it from grey to blue. The empty spaces where the MediaDNA[™] is absent will now display grey segments.

Logos button greyed out and the associated MediaDNA[™] category is hidden

Inverse-mode. Segments in grey where the MediaDNA[™] is not present in the video

Timeline Segments

- > When a video is selected, a timeline panel and video player are loaded.
- > The user drags the scrubber (video play head) of the timeline or video player to navigate across the video.
- > The user can click any point at the time scale area to set at the video to start at that duration.
- > The current time of video is displayed at the left corner of timeline in "[hours]:[minutes]:[seconds]" format.

Downloads

At the top right corner of the plugin, there is a "Download Selected" drop down menu. This menu enables the download of the selected video in 'Original' quality, or the smaller 'Proxy' quality.

 Proxy quality videos are differentiated from their original by a suffix of "_Proxy" in its title (e.g. myVideo_Proxy.mp4).

- > There will be scenarios where the download buttons may be greyed out:
 - If there is no video being selected.
 - If the video file exists in the project folder.
 - If the video is already in the download queue (including cancelled and completed videos).
- > Click on the "Proxy" or "Original" button to add the item to the download queue and it will start the download.
 - The file and its selected quality will be populated into the download queue.
 - A blue bar will appear below the file in the queue to reflect the download progress.
 - A blue bar will also appear when the 'Download Selected' menu is collapsed to show the cumulative progress of all downloading files (Excludes completed and cancelled files).

Expanded		Collapsed
	✓Download Selected	
🛓 Proxy (In Queue)		>Download Selected
📥 Original (In Queue)

Segment Selections

There are a few ways of interacting with the segments to select the desired ones for further action.

- > Segments can be individually selected by clicking on them.
 - When selected, the segment will turn yellow (or white in Inverse-mode).
- > On the left of each MediaDNA[™], there is a 'plus icon' that functions as a Select-all button.
 - When it's blue (if not all segments are selected): Selects all segments in the row of MediaDNA™.
 - When it's yellow (if all segments selected): Deselects all segments in the row of MediaDNA™.
- ➤ There is a "Deselect All" button on the top right of the MediaDNA[™] section right next to the inverse clip selection button. Click this button to deselect all segments.
- > Hiding categories (using the filter buttons) will also deselect segments from the hidden categories.
- > Switching to/from Inverse-mode will also deselect all segments.

Importing Markers and Clips

The plugin also enables importing clip-markers and sub-clips of selected segments.

- > To perform the import action, please ensure the video is available.
 - Download the video via the download feature provided. or
 - By external means, ensure the video has the same title and placed in the project folder.
- > Imports will choose original quality videos if both qualities of the video are available.
- Import mode can be selected by enabling or disabling the "IMPORT Markers |Clips" buttons. (Highlighted Blue: Enabled)
 - If both buttons are disabled, no import action will occur.
 - If Markers is enabled, clip-markers will be generated based on the segments.
 - Marker will have the category as its name, and the subject in the comments (e.g. Name: "People:", Comments: "Elvis Presley").

Marker Peopl	e: @ 00:02:59:24	
	People:	
	Elvis Presley	^
Options:		
Marker C	olor:	
Comn	nent Marker	

 In Inverse-mode, the markers will have a "Not" prefix in the comments (e.g. Name: "People", Comments: "Not Elvis Presley").

Marker Pecple: @ 00:00:00:00

Name:	People:			
Time:				
Comments:	Not Elvis Presle	γ		^
				~
Custon				
Options:				
Marker (Iolor:			
Comr	ment Marker			

- > If Clips is enabled, sub-clips will be generated based on the segments.
 - Sub clips will be named [Filename]_[Time_Start_In_Secs]_[Time_End_In_Secs] (e.g. MyFile.mp4_4_24).
