TEAMIUM

Production Management + Resource Scheduler + Workflow Automation
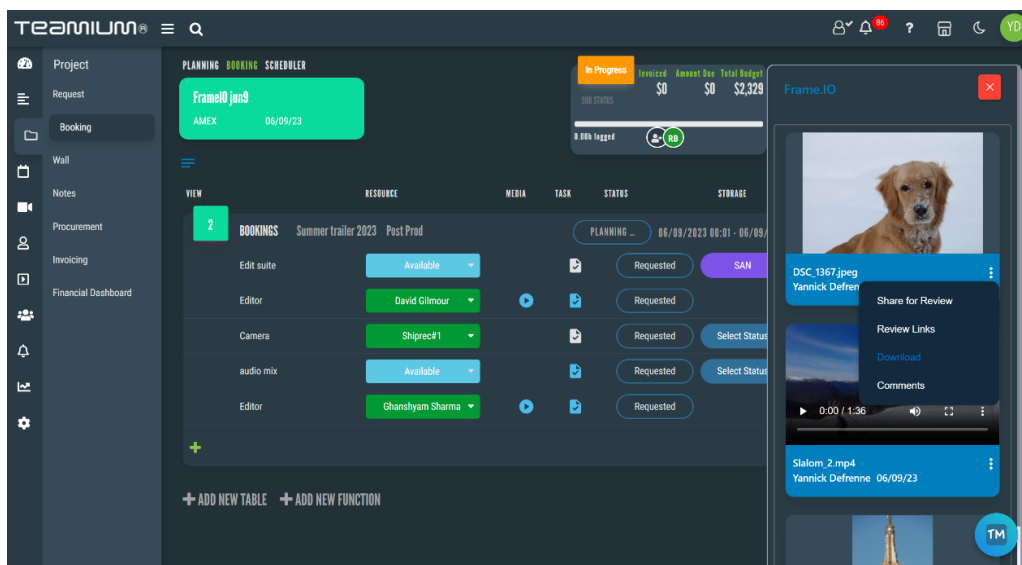

Teamium Integration with Adobe Premiere Pro and Frame.io

Teamium adds task scheduling, time tracking and project management capabilities to Adobe's Premiere Pro to Frame.io. With the integration of Teamium into the workflows, users of Adobe's post-production tools gain unparalleled capabilities, visibility and control of the project and are able to further streamline their collaboration.

They also enjoy access to the full range of tools from planning, budgeting, resource scheduling, facilities management, equipment handling, and cost actualization. The seamless workflow ensures that every project stays on track, deadlines are met, and everyone is on the same page. With single sign-on, an Adobe user is seamlessly granted access to Teamium.
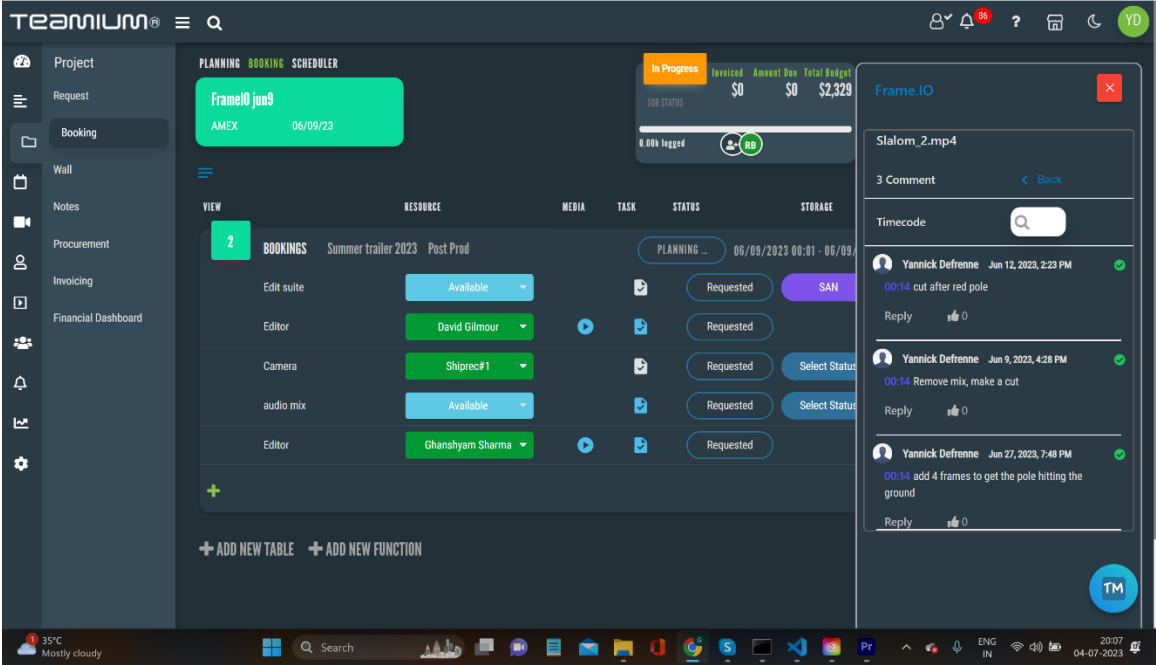

So, what can users expect from this integration?

📅 **TASK ASSIGNMENT AND TRACKING**: Users can link to an existing project in Frame and view the media files, parse the comments for actionable tasks.

Teamium integration with Adobe Premiere Pro and Frame

They can self-assign tasks or assign them to another team member. They can mark the task status as completed. Alternatively, the project manager, who has visibility to the talent pool's skills, calendar availability, and capacity, can also assign tasks to individuals for better planning and resource utilization. She can also set due dates for individual tasks and track completion or overdue status on a task dashboard. The task status is also updated on Frame for everyone to see.

Similarly, project manager can create a project on Teamium, find and assign project tasks to team members and notify them. The assigned team members can then view the project in Frame. With two-way synchronization and a single sign-on, users do not have to switch between the two applications.

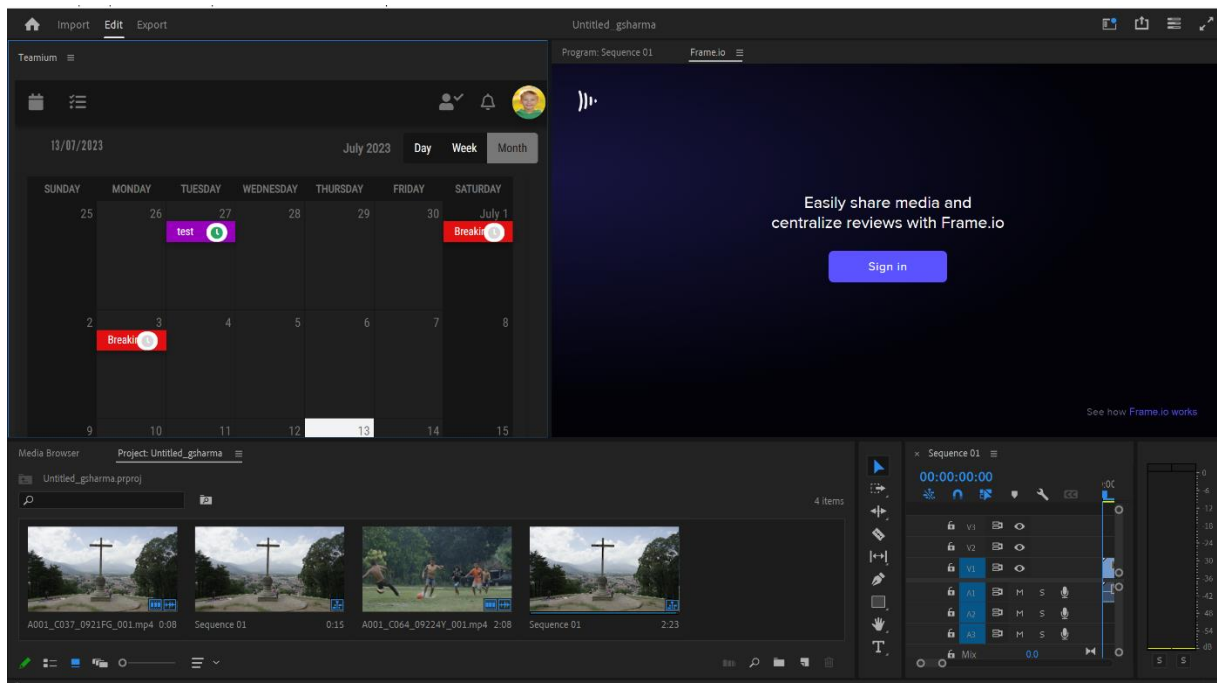

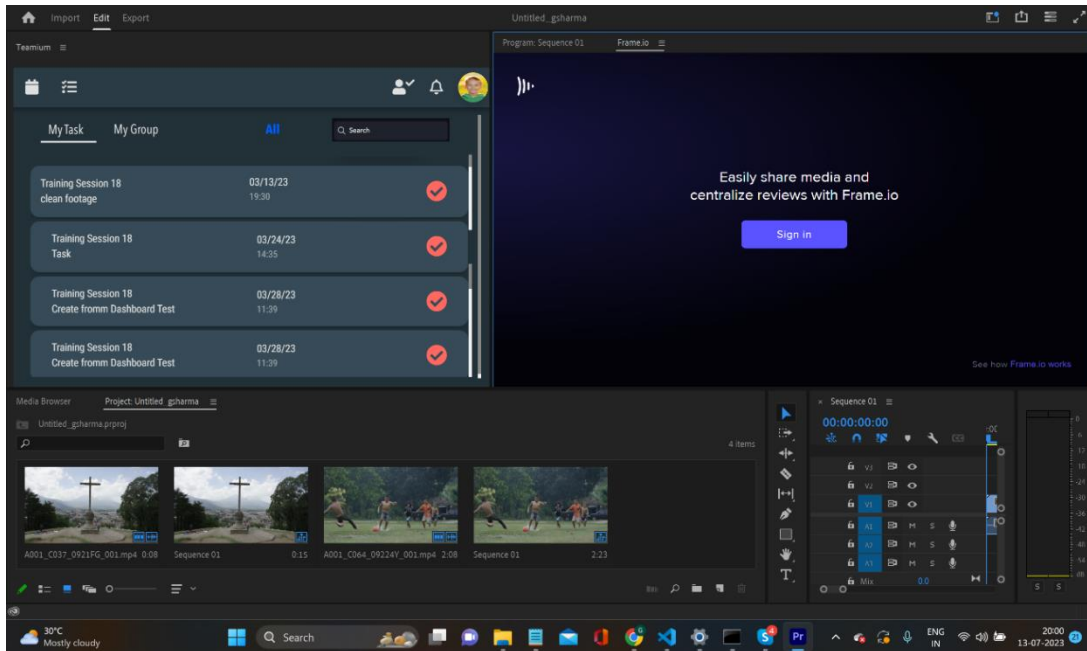

⏱ TIME MANAGEMENT

Teamium provides comprehensive time management capabilities. Users can enter actual hours spent on individual tasks. They can mark a task as completed and enter the time manually or automatically using start and end timer. By aggregating the time entries, and with the use of built-in rate cards, Teamium calculates the true cost of the all the tasks associated to the project for more accurate billing and monetization.

Teamium Panel in Premiere Pro

Teamium is available to users as a plug-in panel on Premiere Pro. They can view their assigned projects and tasks in their calendar view. If they are also Frame users, they can see their tasks in the Teamium panel as well. Users can self-assign a task or a project on their dashboard and enter time upon task completion.

💰 COST ACTUALIZATION AND MONETIZATION

Teamium actualizes the cost based on budgeted or actual time entry. Any overtime is also calculated using labor rules. Teamium can share this data with the payment system as well as invoicing system for cost monetization.

🗄 STORAGE CAPACITY PLANNING

Teamium keeps track of media storage capacity and project capacity utilization, can send alerts as well as feed the storage data to the billing system for payments.

✅ ACTIONABLE INSIGHTS

Teamium's management tools provide valuable data and analytics, such as project profitability, capacity utilization, actual vs. budgeted costs, empowering businesses to optimize capacity planning, control costs, and make informed decisions.

 We are incredibly excited about this partnership and the value it will bring to both Teamium and Adobe's customers. Together, we will empower project

teams to unlock their full potential, eliminate capacity bottlenecks, streamline their operations, and achieve unparalleled success.

Teamium will continue to enrich the integration with Adobe tools with innovative management and collaboration features to help teams unlock their full potential, eliminate capacity bottlenecks, streamline their operations, and achieve unparalleled success.
