

# Active Everywhere

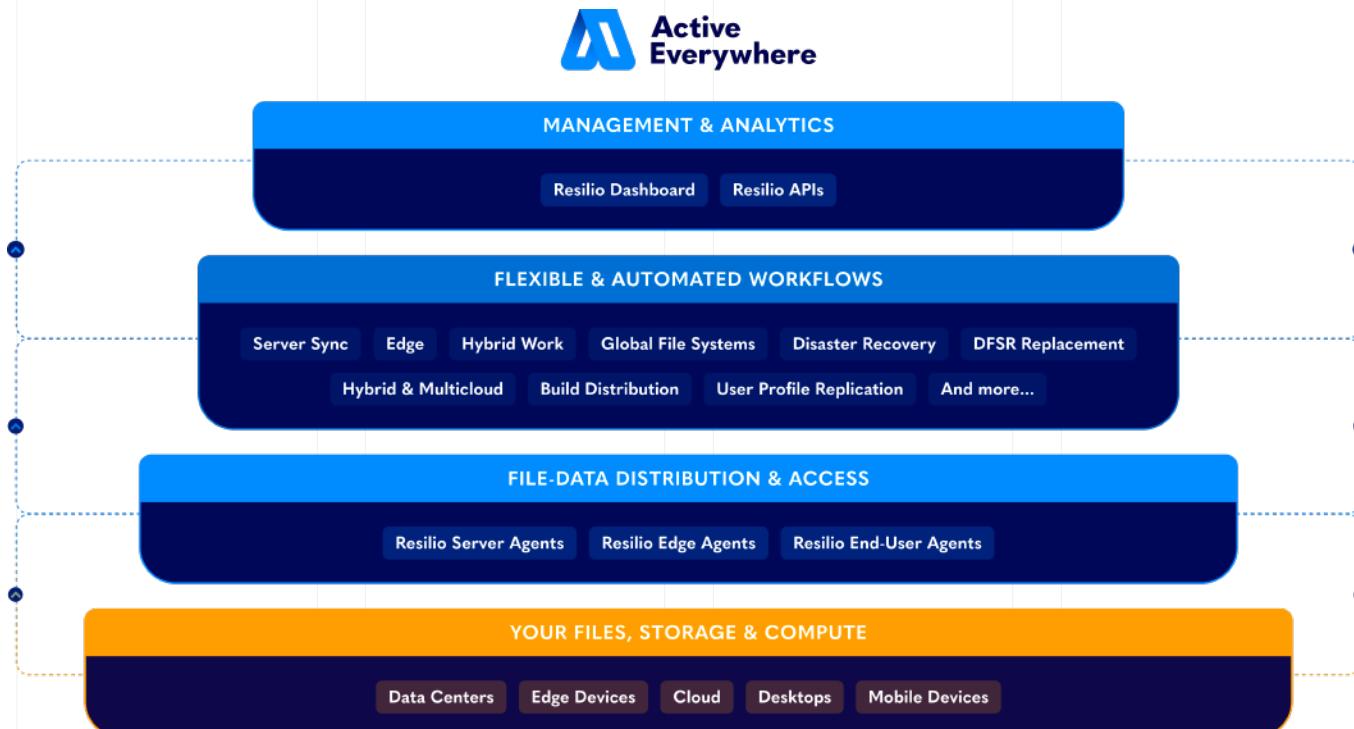

## Move faster with the new standard for high-performance data everywhere.

As data storage struggles to keep up, teams spread out globally, and operations expand into the cloud, many organizations continue to rely on slow synchronization and replication tools not designed for today's speed and scale of business.

To meet this demand, we created **Resilio Active Everywhere**, a modern distributed data movement platform that empowers organizations to efficiently, securely, and flexibly automate how files move and where they live across global infrastructure.

Our platform delivers the high speed of a distributed architecture with centralized control, featuring built-in WAN optimization that minimizes the impact of high latency to reliably and predictably provide universal access across any type of network.

Distributed, High-Speed, and Automated File Synchronization & Access Running on Your Existing Infrastructure

# The P2P Difference

**Resilio Active Everywhere** connects cloud, data centers, and edge environments into a single, high-performance, active-active storage network using peer-to-peer (P2P) system design.

Hub-and-spoke legacy architecture fights against growth. P2P-based distributed architecture thrives on it. Every problem you solve in hub-and-spoke with more money and complexity, P2P solves by design.

With Resilio, every endpoint becomes part of a peer-to-peer fabric, eliminating bottlenecks and single points of failure, reducing costs by eliminating redundant systems, and ensuring continuous, VPN-less file-based data accessibility across your enterprise—in the office or remote. ## HUB AND SPOKE

## PEER TO PEER

vs.

## Key Technical Capabilities

### Real-Time Sync

Real-time file synchronization allows you to automatically sync changed files and folders without delay.

### Distributed File System

Keep data on one or more primary storage systems and use file caching to sync the data you need to remote locations.

### Hybrid Infrastructure

Easy integration with the object storage provider of your choice. We support on-premises and cloud-to-cloud sync.

### Private and Secure

Transfer files over end-to-end encrypted connections. State of the art security reviewed and verified by 3rd party experts. Your data only touches devices you own.

# Modern Enterprises Run on Resilio

Over 500 fast-growing companies are using Resilio to connect and automate data movement around the world.

Active Everywhere is easily managed and deployed by organizations of any scale—from collaborative creative groups to the world's most demanding DevOps and Engineering teams.

## Move Faster. Gain a Competitive Edge.

"Resilio has been a game changer. The near real-time sync is impressive. Also, its ability to scale and handle millions of files is what sets it apart from other solutions. Also, the fact that sync happens over a mesh network instead of being limited to point-to-point sync enables our different locations to work as a unified team."

– Danny Yoon, Partner and Creative Director of Mr. Wolf

## 2,000+

Synergy Marine Group now completes application deployments fleet-wide in just 2-3 days, **transferring over 32 terabytes of data across unstable satellite connections** and completing 2,000+ deployments over three years—all while maintaining reliable operations.

## 10X

Maffeis Engineering achieved a **10x faster sync for CAD and 3D design plans** among 300 team members across four sites, enabling them to produce more infrastructure projects more quickly under intense deadlines.

# How to Get Started

**Get your organization active everywhere—see how with a personalized demo.**

- Live demonstration with your actual file types and sizes
- Custom architecture design for your infrastructure
- ROI analysis based on your current pain points
- Implementation timeline and success metrics

**SCHEDULE A DEMO**

[sales@resilio.com](mailto:sales@resilio.com)

**Try a guided product trial with a Resilio solutions engineer to solve your specific challenge.**

- Custom deployment recommendations
- ROI calculation for your organization
- Implementation roadmap
- Proof-of-concept trial access

**REQUEST A TRIAL**
